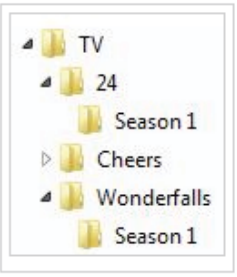
Folder structure

Both the *import folder* and *folder monitoring* functionality needs a specification of a root folder in which the subfolders represents the TV series. The naming of the subfolders must be the titles of the series, as these names are used for matching the serie against the databases. Any folders that are not directly subfolders of the root folder are not recognised as individual TV Series, they are however still traversed for episode files.

The following example shows a folder stucture and the folders that are recognised as TV Series.



(TV) Is the root folder specified to the *import folder / folder monitoring* functionality.
(24) This folder is seen as a TV serie folder, and the name of the folder is used for the serie name.
(Season 1) This folder is ignored, but video files in it are matched as episode files if possible.
(Cheers) This folder is seen as a TV serie folder, the folder name is used for the serie name.
(Wonderfalls) This folder is seen as a TV serie folder, the folder name is used for the serie name.
(Season 1) This folder is ignored, but video files in it are matched as episode files if possible.

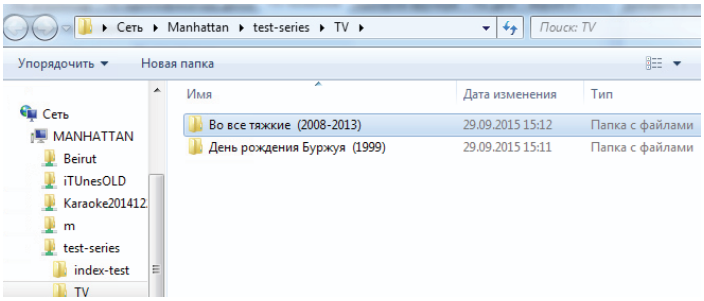
File naming

The files for the TV serie can be directly in the series root folder (the one with the serie name), or in any of its subfolders. The important part is the naming of the video files. The files should always include a number for the season and for the episode. The following rules tells how this numbering can be used.

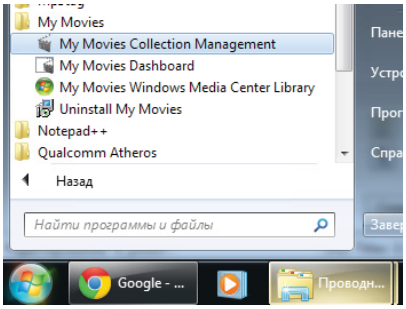
- The season is indicated by an "s" followed by digits and the episode with an "e" followed by digits. Either the season and episode are written right after each other or they are seperated by "." or "-".
  - "Another Simpsons Clip Show S06e03.mkv"
  - "s6-e5 - Sideshow Bob Roberts.mkv"
  - "The Simpsons S6.e4 - Itchy Scratchy Land.mkv"
- The season and episode are specified as above, but with the season and episode in square brackets [], and with an "_" as seperator.
  - The Simpsons[S6]_[E06] - Treehouse of Horror V
- The season is specified as a number followed by an "x" and then the episode number.
  - "6x1 - Bart of Darkness.mkv"
- The season is specified as a number directly followed by the episode number. The episode number must be in two digits.
  - "The Simpsons 602 - Lisas Rival.mkv"
- For multiple episodes in one file the format must be as follows. The season is indicated by an "s" followed by digits and then the first episode with an "e" followed by digits, and then a "-" and an "e" followed by the digits for the last episode.
  - "Simpsons S02E01-E04.mkv"

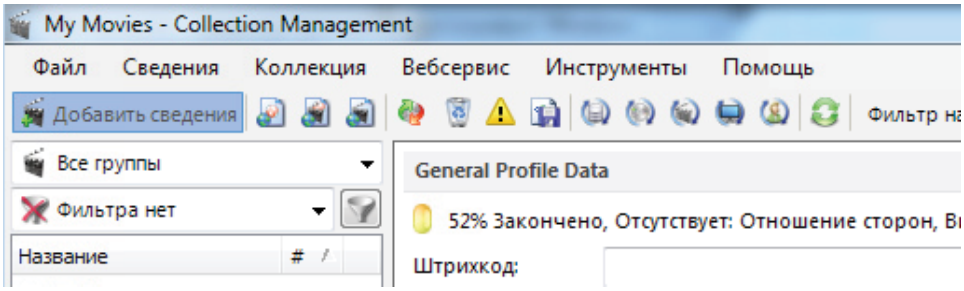
Files with an extention that is a valid video format are recognised by My Movies, this includes files registered in Windows as perceivedType=video, and files configured in monitoring configuration as known video file extentions. The "mkv" file extention in the above examples are just an example of a recognized file type.

Есть папка с сериалом в сетевой папке:



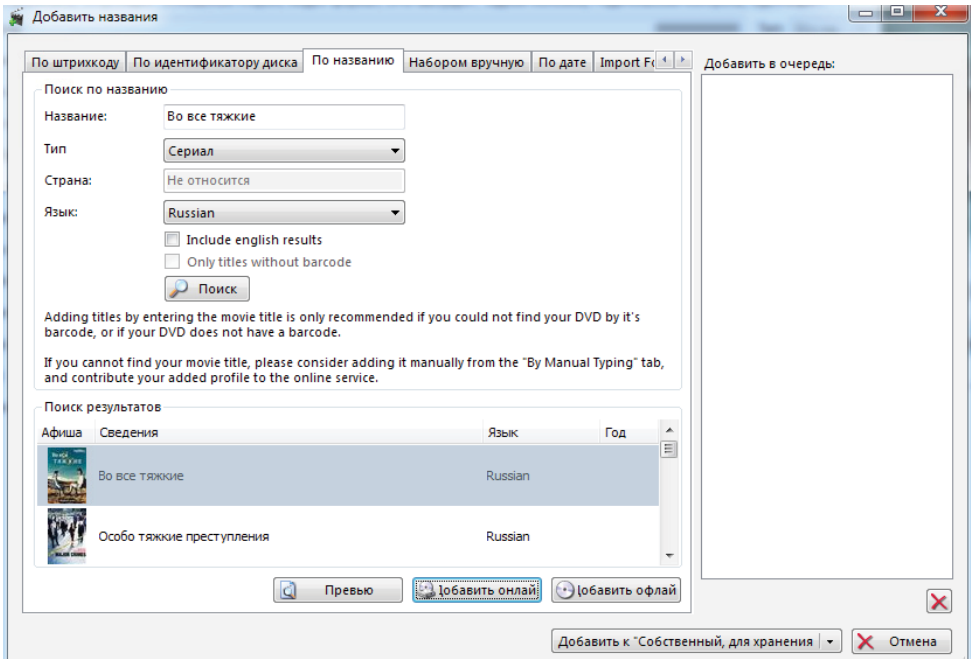
Запускаем приложение My Movies Collection Management



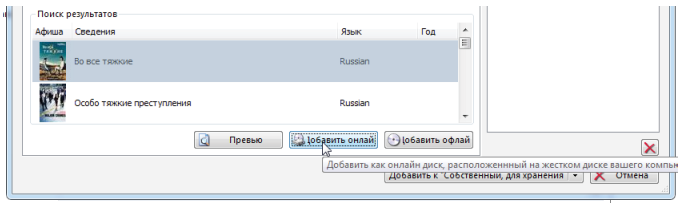


Используем кнопку > Добавить сведения

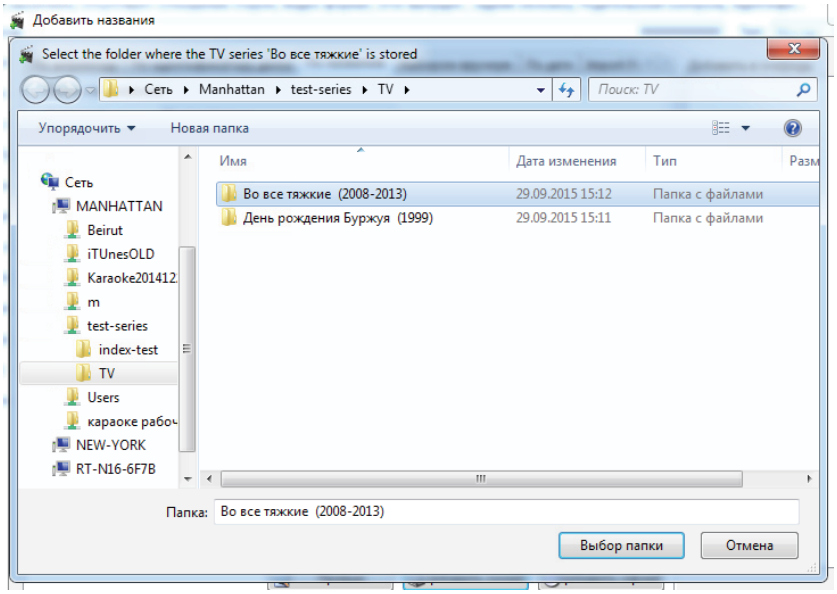
В окне добавить сведения > закладка *По названию*
Название > #Название сериала#
Тип > Сериал
Язык > Russian
Кнопка > Поиск

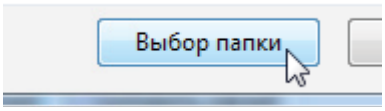


Выбираем сериал > кнопка

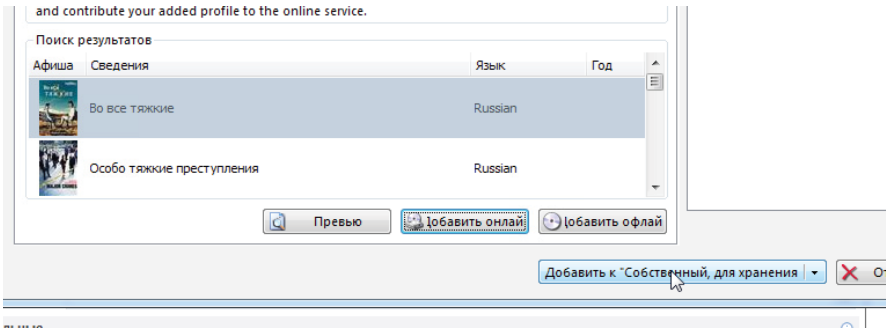


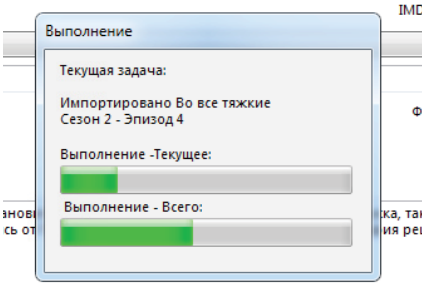
Выбираем папку с сериалом в сетевом окружении

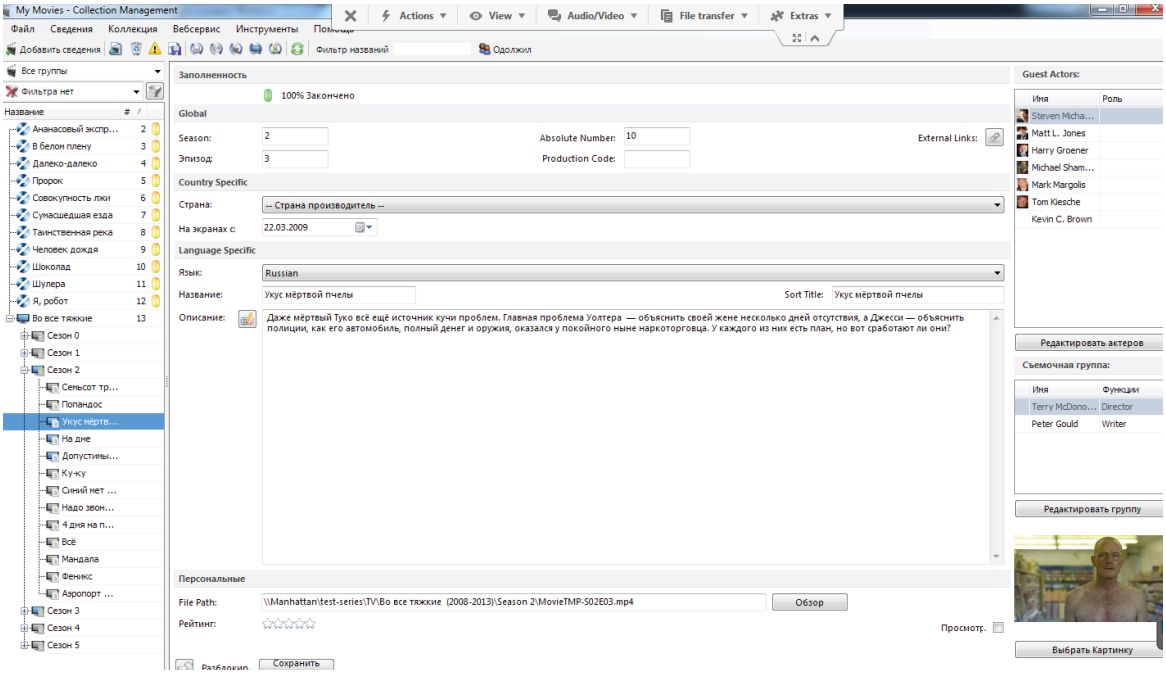




После выбора > кнопка “Добавить к `собственный для хранения”







При необходимости редактируем полученный результат
